

Where do you Live

Sometimes we need to ask from ourselves that

what we are doing ?

what we want to do?

Are we really doing the right the right thing?

As Stephen R. Covey points out, it doesn't matter how fast or high you climb on the ladder if it's leaning against the wrong wall.

Most of the people concentrate on the amount of money they make but no one thinks about how that money is made. As they are focusing on quantity of money make not on the quality of money they make, means from where that money comes from.

There are four quadrants of cash flow.

- Employee
- Self Employed or Small Business owner
- Business owner
- Investors

Most of the People in world around 80 percent live first and second quadrant (Employee and self employed) by working for their bosses. As our education system is like this that we are taught to get good grades and then get good job. Our DNA is programmed like this.

Around 20 percent are able to live in third and fourth quadrant (Business owner and Investors) . and these people are controlling the whole money and world.

Changing job is Not changing Quadrants

We can change our Job, we can even get promotion and salary hike but with the rise it gets eaten up by high taxes and expenses. And in actually we are trapped in this quadrant.

It's in the hand of one individual where he wants to live. Whether to live in relative safety of left side quadrant or to live in the freedom of right side quadrant. The choice is yours
